## **GOVERNOR CUOMO ANNOUNCES LIST OF COMORBIDITIES AND UNDERLYING CONDITIONS ELIGIBLE FOR COVID-19 VACCINE STARTING FEBRUARY 15**

Governor Andrew M. Cuomo today released the list of comorbidities and underlying conditions that New York State will use to determine eligibility for the COVID-19 vaccine. New Yorkers who have one of the comorbidities on the list will be eligible for the vaccine beginning February 15.

*"New Yorkers with comorbidities and underlying conditions exist throughout the state's population—they're our teachers, lawyers and carpenters, in addition to the doctors who keep us safe every day, and they are a highly affected population," Governor Cuomo said. "We're committed to vaccinating vulnerable populations that have suffered the most as we distribute a strictly limited supply of vaccines, and people with comorbidities are 94 percent of the state's COVID deaths. That's why we'll open eligibility to people with comorbidities starting February 15 and give hospitals the ability to use extra doses they have to address that population. Local governments have a week to prepare for the new change—they need to get ready now."*

The full list of comorbidities and underlying conditions is available below. The list is subject to change as additional scientific evidence is published and as New York State obtains and analyzes additional state-specific data.

Adults of any age with the following conditions due to increased risk of moderate or severe illness or death from the virus that causes COVID-19:

- Cancer (current or in remission, including 9/11-related cancers)
- Chronic kidney disease
- Pulmonary Disease, including but not limited to, COPD (chronic obstructive pulmonary disease), asthma (moderate-to-severe), pulmonary fibrosis, cystic fibrosis, and 9/11 related pulmonary diseases
- **Intellectual and Developmental Disabilities including Down Syndrome**
- Heart conditions, including but not limited to heart failure, coronary artery disease, cardiomyopathies, or hypertension (high blood pressure)
- Immunocompromised state (weakened immune system) including but not limited to solid organ transplant or from blood or bone marrow transplant, immune deficiencies, HIV, use of corticosteroids, use of other immune weakening medicines, or other causes
- Severe Obesity (BMI 40 kg/m<sup>2</sup>), Obesity (body mass index [BMI] of 30 kg/m<sup>2</sup> or higher but < 40 kg/m<sup>2</sup>)
- Pregnancy
- Sickle cell disease or Thalassemia
- Type 1 or 2 diabetes mellitus
- Cerebrovascular disease (affects blood vessels and blood supply to the brain)
- Neurologic conditions including but not limited to Alzheimer's Disease or dementia
- Liver disease
